

Release 9.11 Notes

- Rebuild with Target API set to 34 (Android 14). Google Playstore requires all Apps to target API 34 before August 2024.
- Fixed bug with reading large 2D barcodes, previously size limit was 128 bytes which can be too small for Clone Barcodes. New Size limit is 8000 bytes.
- Fixed bug in AIAG barcode processing which prevented the Prefix from being sent to the Host.

Release 9.10 Notes

- Fixed issues with navigation between field in touch mode.
- Fixed popup keyboard does not appear once the app is suspended and resumed.
- Added Clone feature where a complete configuration can be read from one device to another by scanning a 2D barcode prefixed with the <CLONE, ---config data--- >. There is now a CLONE button in the Configuration that will display the configuration as a barcode.
- Added 2D barcode to license popup, so ID can be scanned.
